

Grinding valve seats from  $\varnothing$  50 to 120 mm

## DESCRIPTION

Compression seal is one of the main factors which determine the efficiency of internal combustion engines. This makes the valves and their seats of fundamental importance and if they are worn the efficiency of the engine is reduced.

Working range	$\varnothing$ 50 ÷ 120 mm
Grinding wheel speed rotation	5.500 RPM
Relative motion	12 RPM
Fixed eccentricity	3,0 mm
Motor power	600 W
